

Availability & Injury

Facility * Completed by * Date *

What this sheet controls. What each injury restriction removes or swaps, what an Out athlete does, and how they come back.

1 Your philosophy

Write it the way you would explain it to a new coach. Not imported. It stays with your install notes.

1. Who on your staff sets and clears an athlete's status?

2. How does status get communicated to sport coaches and parents?

2 Your decisions

Pick the answer that matches how you coach. Each answer sets the app's numbers for you. "STS" marks the Strength Through Systems standard.

QUESTION	YOUR ANSWER	WHAT EACH ANSWER MEANS
An athlete who is Out does... *		Prep + rehab (STS): Rehab only: Prep only:
Who can clear an athlete to train? *		Either (STS): Athletic trainer or medical provider. Athletic trainer: Medical provider:
After an injury, the anchor lift comes back... *		Slowly: Start at 50%, add 5% a week. Steadily (STS): Start at 60%, add 10% a week. Quickly: Start at 70%, add 15% a week.

3 Your program

Your exercises, drills, and days. Write them exactly as you want athletes to see them.

Your restrictions

Remove takes out anything tagged for it on the other sheets. Swap replaces the anchor with the exercise you list. Example: No lower body: Swap, Landmine Press 4 x 8.

RESTRICTION	ACTION	SWAP EXERCISE	SETS	REPS
No lower body				
No upper body				
No sprinting				
No jumping				
No contact				

Availability & Injury

4 Advanced numbers (optional)

Leave blank and your Layer 2 answers set these. A filled box overrides the answer. Usually completed with STS during the install.

RULE	YOUR RULE	PROTOTYPE EXAMPLE
Return start load	% max	60
Return weekly step	%	10
Out plan		Core 4 + rehab
Who clears		Either

Common mistake. Letting a good score clear an injured athlete. The score measures readiness, not tissue.
